WE DO NOT SHIP CABBAGE PLANTS C. O. D.

14-lb. Early JERSEY WAKEFIELD

Grown from our Hardy Frost Proof Plants and subjected to Zero Weather for several days after setting out.

How to Set Out, Cultivate and Grow

Deep, sandy loam, with a southern exposure is best for growing cabbage. Apply broadcast from ten to fifteen two-horse wagon loads of well rotted stable manure to the acre and plow in. The land should be harrowed thoroughly and rows laid off three feet apart. If stable manure is not available, apply some good, high grade fertilizer at the rate of ten to fifteen hundred pounds per acre.

The Wakefield varieties should be set out from 15 to 20 inches apart and the flat heading varieties from 24 to 30 inches apart in the rows. It is important to set the plants deep in the ground up to the first leaf, in order to keep the stem from freezing and cracking, which will cause the plant to die. Cultivate deep at first, but when they start to head, cultivate them shallow.

PRICE LIST OF Frost Proof CABBAGE PLANTS

(8 to 10 Degrees above Zero will not injure them)

Shipment Prompt — Weather Permitting

FROM all indications the early crop of Frost Proof Cabbage Plants this season will be an excellent one from a standpoint of quality. While the acreage is not as large as in some former seasons, due principally to the high prices and scarcity of cabbage seed, we have splendid prospects for a good crop of plants.

For the past two years weather conditions have been very unfavorable, each year being attended with a disastrous freeze which killed all or most of the plants, making it impossible for us to fill our orders.

We have taken ample precaution not to run short this season but would urge early orders on account of the anticipated phenomenal demand for plants and seeds of all kinds this year.

Taking Care of the Plants on Arrival

As soon as the plants reach you, take them out of the crates or packages and set them out. It is the nature of Frost Proof Cabbage Plant to be reddish brown or yellow in color and often have the appearance of being dead, so do not jump to the conclusion that they are worthless before giving them a chance to grow. The plants may look yellow and badly wilted after a long shipment, but they are very hardy and tough and with proper care and attention they will come out and make better cabbage than the green sappy plants.

By PARCEL POST Prepaid

100 for 45c

500 to 900 - \$3.00 per 1000

1000 and over 2.75 " "

By EXPRESS at Buyer's Expense
